

Gurumanie Singh Dhiman

+65 9666 9624 | gurumanie.singh@gmail.com | **Singapore Citizen** | linkedin.com/in/gurumanie-singh | gurumanie-singh.github.io

Computer engineering graduate with hands-on experience in log analysis, network monitoring, Linux administration, and security automation. Built and supported secure, log-driven systems, performed root-cause analysis across network infrastructure, and contributed to blue-team defense against live attack traffic. Seeking a Security Engineer or SIEM-focused role.

Education

Bachelor of Science, Computer Engineering (CGPA: 3.85/4)

May 2026

Iowa State University, Ames, IA

Certifications: CompTIA Security+ (SYO-701)

Technical Skills

- **Security Operations:** Log analysis, incident triage, detection support, vulnerability assessment, network defense, IDS/IPS, Wireshark, OWASP Top 10.
- **Networking & Infrastructure:** VLANs, OSPF, PKI, TLS, IAM, AAA, Linux, OpenStack, LibreNMS.
- **Systems & Automation:** Python, Bash, GitLab CI/CD, Docker, Git, systemd, journalctl.
- **Programming:** Python, Java, C, Secure REST APIs, Spring Boot, MySQL, H2.

Experience

Wireless Network Systems Engineer, ARA Wireless Living Lab, Iowa State University

Jun 2025 – Dec 2025

- Investigated failures across multi-node wireless infrastructure using Linux logs and network monitoring tools, performing root-cause analysis to identify faults, misconfigurations, and recurring operational issues.
- Automated deployment workflows with GitLab CI/CD to improve script consistency and reduce manual update risk across networked systems.

Security Experience

Cybersecurity Defence Challenge, Iowa State University

Fall 2025 and Spring 2026

- Competed in a team-based blue-team defense event, placed 3rd overall, and qualified for International Finals (Spring 2026).
- Analyzed live attack traffic from a red team, identified service exploitation and lateral movement attempts, and implemented defensive actions under active adversarial pressure.

Projects

Secure Wireless Aircraft Data Load, Senior Design Project, Iowa State University

Aug 2025 – May 2026

- Led the network infrastructure and design for the Secure Wireless Aircraft Data Load senior design project, selecting a secure architecture aligned with client requirements and implementation constraints.
- Drove technical decisions for secure data transfer, including PKI/TLS, mutual TLS authentication, and certificate validation to prevent unauthorized access.

Threat Brief – Automated Cybersecurity Intelligence Briefing

Mar 2026 - Current

- Developed a Python-based cybersecurity intelligence pipeline that aggregates RSS feeds, enriches articles with CVE references, severity signals, vendor tags, and mitigation-focused summaries.
- Automated daily processing and delivery with GitHub Actions, deduplication logic, retention cleanup, and static site generation to turn raw threat news into structured analyst-facing briefings.

ForFriendSake – iOS Application (Published on App Store)

Nov 2025 - Current

- Built a SwiftUI application with fine-grained Firebase Security Rules and server-side workflow controls to restrict data exposure by membership status, while enforcing squad-private chat and on-demand location handling.
